

HOYER Supply Chain Solutions

Contract logistics – the service of the future

Few other corporate operations are subject to more dramatic changes than the field of logistics. New markets are opened up and goods flow in new directions. HOYER can take care of all your logistics needs and establish flexible, stable logistical systems that are able to meet these demands.

Optimising logistical operations is increasingly becoming a high priority for many companies whose competitiveness depends on flexibility and on concentrating on core competencies.

Excellence in logistics

When quality and safety are important, when deliveries must be available just in time, and when cost needs to be optimised, that is when HOYER's logistical intelligence and innovations are called for. We offer integral analyses of your supply chain and develop solutions that will optimise your flow of goods and information. These are not confined

to the transportation of liquid and bulk products, but also include filling, drumming and storage, particularly of hazardous goods.

It is part of our service portfolio to create the optimum design for the entire supply chain between your suppliers, yourself and your customers.

You and your customers benefit now and in the future

- Efficient supply chains that adapt fast to new conditions without compromising quality
- Greater product and service quality for your customers

Contract logistics

Advantages

- Reduce logistical costs
- Increase efficiency
- Improve readiness for delivery and flexibility
- Innovate through transfer of know-how

Service portfolio

- Consulting: Optimising your supply chain
