

HOYER Supply Chain Solutions

## On-site logistics – a perfect division of labour

In order to become successfully involved in new markets one needs logistics concepts that are both stable and flexible. HOYER takes care of part of your logistics operations, whereby skilled staff integrates smoothly into your on-site corporate operations.

We develop tailor-made concepts to optimise the flow of goods and information, from simple services such as delivering raw materials, through to complex packages including filling, storage and inventory management of finished products.

### Profit from innovative on-site concepts

For many years we have been organising on-site logistical processes for well-known companies. In doing so, our experience as a professional logistics provider stands us in good stead, because we are able to respond individually to the wishes and needs of the customers in their different industries. Particularly when handling hazardous goods,

a service provider must be able to comply with the strict safety and environmental regulations along the entire supply chain.

A wide range of value-added services, such as cargo inspections, working with customers' own IT systems, transporting and handling bulk and palletised goods, as well as renting out logistical equipment, means that you can put together a package tailored to your specific needs.

### By working together we aim to

- Stabilise the quality of your on-site logistics
- Minimise the cost of the supply chain

## On-site logistics

### Advantages
